Abstract (en)

[origin: EP1741521A1] The hand tool has a motor (6) housed in a housing (4). Tools (8) are propelled around an axis (A) by the motor with a work piece part (12) rising out for a disk-shaped tool. A protection hood (22) for the partial cover of the tool is defined being held opposite the housing and axially supported (32) toward the axis and being rotatable around the axis. At the housing a turning lock (40) is provided which has a bolting device position. The axial support and the turning lock are components of a pre-mountable attachment arrangement (20), which connect to the equipment housing.
