Abstract (en)
[origin: EP1741526A2] The paper punch has a lower part (12) having a mounting rod (18). The rod is adjustably mounted to a base (22) having a channel (30) and being adjustable against pressure of a spring (26) for a punch (24) having hole segments (20). The lower part has a tiltable print lever (28) providing low pressure spring action against the punches. In the channel a compression piece (50) is provided having a limiting wall (56) accomplished by an operating cam (58). The cam is strength subjectable by means of an actuator (64) for pressing the compression piece to the mounting rod. An independent claim is included for a punch segment.
