Abstract (en)

The tray has a rigid lower shell (1) in which a pad (8) is disposed, where the pad is made of an adsorbing material whose surface has a set of holes obtained by mechanical perforations (13). The shell includes a bottom (3) which comprises a slug (10) projecting towards the inside of the shell.

The slug cooperates with a hole (9) correspondingly provided in the pad to maintain the pad on the bottom of the shell by clipping. The slug has an element (12) laterally projecting, to form a lateral hook, and locking the pad around the slug. An independent claim is also included for a method of manufacturing a tray.
