Abstract (en)

A washing machine includes a decorative panel P hinged along a vertical side of the base W of the machine so as to cover completely the front part of the latter thus hiding the porthole door D, the control panel C and the load drawer L, said panel P having a substantially increased thickness with respect to conventional decorative panels, indicatively at least 8 cm, and being provided with an internal recess R in which there are arranged a plurality of shelves S suitable to receive the items required to operate the washing machine such as the packages of detergent, softener or other additives, floor cloths and sponges, the instruction booklet, etc. In this way, the user has everything at hand and the presence of panel P is no longer a disturbance to the access to an adjacent piece of furniture containing said items, and furthermore the washing machine can be arranged as a stand-alone appliance, without any necessity to arrange external shelves and/or pieces of furniture.
