Abstract (en)

The frog has spacer components (63) interposed between projection components (35, 36) and a movable point mounted on a cradle assembly (3). A threaded transverse shank (75) mounted on a bush assembly (81) extends in cross-section through the projection components, the spacers and the movable point. A security shim (83) removably fixes the movable point in a fitting component (12) such that the spacer components are fixed to the projection components in a removable manner.
