Abstract (en)
[origin: EP1741872A2] The system has a rolling shaft of a rolling shutter (7) positioned above a woodwork (9), and a closing element receiving an inspection panel in the form of a rectangular trap door (8) that is connected to an insulator. The shutter placed in a U-shaped case (10) forms an upper part of an opening in a wall (14) of a building, where the case is formed of light concrete and is opened towards interior of the building. The case has an available inner space (E101) having a width of the opening and a horizontal symmetrical plane arranged at height of the shaft. Independent claims are also included for the following: (1) a method for mounting a rolling shutter system (2) a case for housing a rolling shutter.
