Abstract (en)

[origin: US2005252921A1] A mop bucket can be used to apply liquid to a stack of flat mop pads. The mop bucket includes a container body with an opening at a top portion thereof, a liquid storage area within the container body, and a pad storage area within the container body and in fluid communication with the liquid storage area. The liquid storage area is below the pad storage area when the bucket is in an upright position. The mop bucket also includes a lid configured to form a substantially liquid-tight seal of the opening of the container body.
