Abstract (en)

[origin: US2007215187A1] A dishwasher includes a washing tub, a height-adjustable upper rack, and a spray arm disposed on the upper rack. A stationary liquid conduit disposed in the washing tub supplies the spray arm with wash water, the liquid conduit having a portion extending from the sidewall. A feed tube member including a funnel opening is disposed on the upper rack and is connected to the spray arm. A coupling element engages the feed tube member via the funnel opening at a rear of the rack when the rack is inserted in the washing tub. The coupling element includes a pivoting tube having a first end operatively connected to the portion of the liquid conduit and a second end including a right-angled tube end portion extending toward the funnel opening.
