Abstract (en)

[origin: WO2005092638A2] Method to produce a covering modular panel (10) comprising a plurality of decorative elements (13) arranged on the same plane and distanced from each other according to a pre-established pattern so as to define a plurality of intervals or grooves (15), filled with a cohesive material. The method comprises a first step (16) of co-planar and distanced positioning of the decorative elements (13) on a supporting plane, a second step (17) of filling the grooves (15) by means of a not yet polymerized thermosetting resin, a third step (18) of polymerizing the thermosetting resin, and a fourth step (19) of removing from the supporting plane the decorative elements (13) connected to each other by the polymerized thermosetting resin.
