Abstract (en)  
A lever fastening (1, 100) comprises a base (3), a hook (17) which can engage in a rack element (20), a tie-rod (14) extending from the said hook, and a first lever (5) associated with the tie-rod and hinged on the said base so that it can swing between an open position and a closed position, in which the hook (17) is, respectively, moved away from and towards the base, together with a second lever (10) connected to the tie-rod to divide the total movement between the hook and the base into corresponding movements obtained by swinging the first and second levers.
