Abstract (en)
[origin: EP1743615A1] The lift has a lifting device for height adjustment of a seat plate (2) and a backrest (3) between a lowest and a highest end positions. A lock releasing device couples the backrest and the plate above the lowest end position. The device has a locking bolt (12) that is movable between a locking position and a releasing position, where the bolt releases the backrest and the plate from each other in the releasing position. An independent claim is also included for a lock releasing device for a bath lift comprising a locking bolt.
