Abstract (en)

The device has a wash roller (2) connected to a cylinder to be cleaned. A collecting tray (6) is mounted movably relative to the wash roller in such a manner that a wiper (4) stays in contact with a surface of the wash roller temporarily by a corresponding movement of the collecting tray or disengaged from the surface of the roller. The wiper is formed as a wiper bar and sits in a retainer (5) attached to the wiper bar or in the collecting tray, where the retainer has two side walls that are provided with through holes.
