Abstract (en)  
[origin: EP1743847A1] The package has a package upper part (2) and a package lower part (3) formed from two sheet materials, respectively, where the parts are firmly welded with each other at a side, and a sealing is provided removably at another side. Attenuation is provided on a side of the welding in the materials such that a buckling fold is formed. The attenuation is formed by a reduction of the cross sectional surface of the materials. An independent claim is also included for a method for producing a package.
