Abstract (en)

The method involves using a light source in the form of a spotlight (1) for irradiating light to illuminate an object and a light image (5) on the surface of the object in a predetermined angle area in a first lighting portion. Another image is displayed by a further light portion radiated from the spotlight in predetermined angle range on the surface of the object. The light images are arranged on overlapping surface areas on the object. An independent claim is included for the illuminating device.
