Abstract (en)
[origin: WO2005112730A1] The invention relates to a dishwasher machine comprising a rinsing container (1) which can be closed on the front side thereof by an appliance door that can be pivoted about a horizontal axis on the bottom section thereof. A base region (3) extends beneath the rinsing container (1), said base region being defined at the bottom by a collecting vessel (32), to the rear by a cover (2), and to the front by a connecting strip (10). Said dishwasher machine also comprises height-adjustable appliance feet (13, 14) and a regulating device for modifying the closing behaviour of the appliance door. In order to construct the base region (3) in a simple, easy-to-assemble, and nevertheless easily accessible manner, the lateral limits of the base region (3) are formed by two base parts (11, 12) which are respectively embodied as a narrow receiving housing for the appliance feet (13, 14), the height adjusting mechanism and the regulating device, and are respectively fixed to the cover (2) and to the connecting strip (10).
