Abstract (en)

[origin: WO2005102852A1] A locking system (10) to be used in a container (20) comprising walls (30, 40) and a base (50), wherein at least a section (34, 44) of at least one wall (30, 40) is movable attached to the container. The locking system comprises at least one locking device (10) having at least one lock lever arm (11, 12) rotatable about at least one pivot axis (13) and at least one latch (14) interacting with at least one lock recess (15). The lock lever arm is yieldable biased by a spring (60) into engagement with the lock recess for releasably attaching the wall section to the container.
