Abstract (en)  
[origin: WO2005108668A1] A device for ironing and/or drying garments comprises an outer inflatable body (2) with a torso region (21), a supporting frame (6) arranged in the outer inflatable body (2), and an inner inflatable body (3) which extends at least over the torso region (21) of the outer inflatable body (2) and comprises in this region two halves (31, 32) which are arranged on opposite sides of the supporting frame (6) and whose inner side is at least partially supported on the supporting frame (6). The device is characterised in that a bracing device (7, 8, 9) is provided on the inner inflatable body (3) to brace the two halves (31, 32) of the inner inflatable body (3) relative to the supporting frame (6). The bracing device comprises two elongated connection means (7); the first connection means (7) is secured to the front part of the inside of the first half (31) of the inner inflatable body (3) and the second connection means (7) is secured to the front part of the inside of the second half (32) of the inner inflatable body (3).
