Abstract (en)
[origin: WO2005108730A1] The invention relates to a carousel door comprising an outer, fixed drum wall provided with two openings, and a rotating device which is arranged inside the surrounding drum wall and comprises at least two rotating door leaves. The aim of the invention is to create an improved carousel door which is provided with a more effective anti-blocking system causing less material stress. To this end, each door leaf (5) comprises a section (6) that can be pivoted about a vertical axis (7).
