Abstract (en)

[origin: EP1745717A2] The applicator (3) has an application nozzle (6) comprising a body made of porous material and covered with flocking. The body has a distal portion with an application surface, where the distal portion is connected to a proximal portion. A thin zone forms a joint between the distal and proximal portions and permits the distal portion to pivot relative to the proximal portion when the application surface is pressed against a support. Independent claims are also included for the following: (1) a device for conditioning and applying a product comprising an applicator (2) a method for makeup of a support.
