Abstract (en)  
The device has two rotatable sharpening wheels (4, 5) and an electro motor for driving the sharpening wheels. The sharpening wheels are formed as a base wheel coated with an abrasive, which consists of boron. The wheels has grooves (4c, 5c) and rods running along their outer surface. The wheels are arranged in a spatial proximity to each other such that the rods and grooves of the sharpening wheels are engaged into one another.
