Abstract (en)
[origin: EP1745893A1] The drive has a housing (1) with a motor that drives a pump station (9), where the motor is arranged in such a manner that a drive shaft of the motor reaches the housing wall. The housing exhibits two handles (4), which engages a bolting device in a locking position and engage with a retaining recess of the pump station. The handles are distributly arranged over the circumference of the housing.
