Abstract (en)

[origin: EP1745895A1] The device has a blade lifting device whose lifting movement defines a machine cycle, at least one blade for top cutting, foot cutting and leading edge cutting of the product (16) and an alignment device (30) at least movable on one side to push against the product to bring it into a cutting position. It has an arrangement (35,42) for initiating and/or ending the pushing movement so that the time of starting the movement and/or the duration of the pushing movement lies within the cycle time of the device independently of the lifting movement of the blade lifting device.
