Abstract (en)
[origin: EP1745929A1] The clamping unit (30) is located at one end of the cylindrical casing (16). The other end of the casing is carried by a detachable bearing (46) in the machine frame. This bearing includes a mandrel (46) mounted detachably on part of the frame (14). It reaches into the end of the casing, and into an insert (42) within it. This forms the outer ring of the bearing. A second mandrel (18) has a guide tube (40) extending freely and axially through the inside of the cylindrical casing. It engages the mandrel (18) when the cylinder is slid on.
