Abstract (en)

The present invention relates to a process for the cyclic production of packaging bags (3) from a planar web (7), on a bagging machine which comprises detection means (19) for the detection of print-marks (18,18',18'') which are located on the web and control means to control the motion of the film-web (7), whereas: - the web is formed into a film tube (10), - the web is transported by transportation means intermittently, so that the velocity of the web is zero between at the beginning and at the end of each motion of the film-web (7).
