Abstract (en)  
The device has an electrical dummy load for a piezoelectric injector to be tested, where the load is connected between terminals. The load has a capacitor (8) and a suppressor diode (10), where the capacitance of the capacitor corresponds to the capacitance of the injector. A light emitting diode is connected to the capacitor. A current-direction dependant signal mechanism is switched in parallel to the capacitor. An independent claim is also included for a method for testing a piezoelectric injector.

Abstract (de)  
Die Erfindung betrifft eine Vorrichtung und ein Verfahren zum Prüfen eines Piezoinjektors eines Common-Rail-Systems. Um die Fehlererkennung zu verbessern, umfasst die Prüfvorrichtung (1) eine elektrische Ersatzlast (8,10) für den Injektor.
