Abstract (en)

In a method for sharing multimedia application data by a plurality of communication devices (20, 30, 40), at least two communication devices (20, 30, 40) establish a short-rang wireless communication link (21, 31, 41) to a data distribution device (10). At least one of the communication devices (20, 30, 40) informs the data distribution device (10) on the data that are offered for sharing and these data are presented by the data distribution device (10) on a display (15). A user of one of the communication devices (20, 30, 40) being connected to the data distribution device (10) selects and requests data that he wants to download to its communication device (20, 30, 40) and the requested data are then transmitted to the communication device via the data distribution device (20, 30, 40).
