Abstract (en)

[origin: WO2005099470A1] The present invention relates to a method of producing acid-coagulated, fermented, fresh cheese with an extrudable and homogeneous texture comprising cutting, heating, pressing and agitating a fermented curd prepared from skimmed, homogenised and heat-treated milk, wherein the pressed curd is subjected to intensive high-shear agitation in a non-pressure-tight container equipped with a cutting and blending device until reaching a substantially homogeneous texture, and, after cooling, the temperature is adjusted to avoid damage to fresh cheese. In addition, the present invention relates to acid-coagulated, fermented fresh cheese of plastic and homogeneous texture, which is preferably of the curd cheese type, to a fresh cheese preparation comprising it, and to a dairy dessert produced using any of the above. Preferably, the dairy dessert of the present invention is flavoured and enrobed. Furthermore, the present invention relates to an apparatus of batch operation, particularly designed to cut and blend food materials of soft consistency.
