Abstract (en)
[origin: WO2005102128A1] A hinge (10) for a door leaf (20), a window and the like has a pin (30) comprising a holder (40) for the door leaf, the window and the like, and a connecting part (56), said pin being connected to the connecting part, pivotally on its longitudinal axis (C). One end (30a) of the pin (30) and a first carrier plate (52) engage each other by cam surfaces (33, 55), and the other end (30b) of the pin (30) and a second carrier plate (53) engage each other by cam surfaces (33, 55). Means (60) are arranged to lock the respective carrier plates (52, 53) to the connecting part (56) and unlock the respective carrier plates from the connecting part so as to allow both a left- and a right-hung door leaf, window and the like.
