Abstract (en)

[origin: WO2005121423A1] The inventive mechanism for forming a loom comprises at least one length-adjustable and/or removable rod (3") which is provided with a first part (33) comprising a pin (32) sliding in a tubular part (31) and means (50, 60, 62, 70) for locking said pin (32) in operating position in the tubular part (31). The inventive rod is provided with a sheath (40) whose internal volume (V41) forms a housing for receiving and centring the pin (32) with respect to the tubular part (31). Said sheath is arranged inside the tubular part (31) and holds at least one locking means (50, 70) in operating position with respect to the tubular part (31).
