Abstract (en)  
[origin: WO2005111347A1] This invention relates to lock spindles divided into two parts and connected by a connecting pin. The invention particularly relates to solenoid locks. The invention eliminates the unwanted effect of an external force applied on the divided spindle. The divided spindle includes at least one flexible element and, in some embodiment, a bore extension that prevents unwanted frictional forces caused by an external force applied to the spindle.
