Abstract (en)

[origin: EP1748137A2] The hinge has a block (21) rotatably mounted on a block (11), where the blocks (11, 21) respectively comprise bearing elements (13, 23). The bearing elements are mutually cooperated in rotation with respect to an axial direction (10) of a geometric axis of a hinge pin (9). The bearing element (13) is movably mounted, in a predetermined axial adjustment range extending along the axial direction, with respect to a fixation element (12) of the block (11). The bearing element (13) is associated to a slot (14) and a locking element (15).
