Abstract (en)

[origin: EP1748158A1] The bushing (200) has a tubular body (202) having a longitudinal axis (Z-Z), and four branches (206) extending radially outwards with respect to the longitudinal axis of the body and axially over the full height of the body. The branches are distributed around the circumference of the tubular body in an equidistant manner, where each branch has a rectangular transversal section. Each branch has walls applied against the walls of a recess, where each wall has an indentation turned toward the inside of one of the branches. Another bushing is interposed between a guide pivot and the bushing (200). Independent claims are also included for the following: (1) a turbomachine ring including a set of recesses each for receiving a guide pivot of a variable-pitch vane (2) a turbomachine compressor including a ring (3) a turbomachine including a ring.
