Abstract (en)

[origin: EP1748266A2] A container for drying material for a motor vehicle climate control cold medium comprises an arrangement with a collector connected to a condenser collection tube, with the container being formed between a deflection wall (20) and a closing cover in the form of a bar with in and out flow side wall openings of the collector bounding the space and a stopper (60(6)) comprising a marking working with the collector wall so as to adjust the stopper with the receiver in the prescribed position in the collector.
