Abstract (en)

[origin: EP1748331A1] The watch has a water resistant case mounted on a dial provided with minute and hour hands (18, 20), where the hands are driven by respective motors (32, 34). A pressure sensor (36) transmits a function of signals to the hands for aligning the hands on a same side of axis, in a dive mode. Angular position of the hands is synchronized with control signals of an electronic circuit (30), in a synchronization mode. Graduations for reading instantaneous depth and minutes are similar. A liquid crystal display displays the depth in parallel with the indication of the depth by the hands.
