Abstract (en)  
[origin: WO2005110178A1] The invention provides a cleaning appliance (10; 50) having a main body (12; 52) and a hose (20; 60) attached thereto, the hose (20; 60) being attached to the main body (12; 52) by means of a connector (30; 70). The connector (30; 70) is movable between a first position in which the hose (20; 60) is stored on the main body (12; 52) and a second position in which the hose (20; 60) is usable for carrying a dirty airflow to the main body (12; 52) for cleaning purposes. When the connector (30; 70) is in the second position, the hose (20; 60) extends away from the main body (12; 52) in a plane which passes through the centre of the main body (12; 52). This improves the balance of the main body (12; 52) during use.
