Abstract (en)
[origin: WO2005113339A1] A container for carrying and pouring flowable materials having a bucket portion with a side portion, a closed bottom portion and an upper rim area at least partially defining an open top; a handle attached near or on the upper rim area; at least three gripping surfaces located in the closed bottom portion of the bucket portion to permit multiple means of gripping the container. A method for dispensing flowable materials having the steps of gripping a handle rotatably affixed to a container having material therein with a first hand, wherein at least a portion of the handle is located above a discharge opening of the container; gripping a gripping surface located about the middle of the bottom of the container with a second hand; and tipping the container to discharge material from within the container using the first hand and the handle as a pivot point while lifting the bottom of the container with the second hand gripping the gripping surface.
