Abstract (en)

[origin: WO2005116122A1] The invention relates to a method for treating a super capacitor electrode film (12) obtained by extruding a mixture of polymers and active charges without a solvent, said mixture comprising at least one soluble polymer. The method comprises a step in which an extractable part of the soluble polymer(s) is eliminated by immersing the film in an aqueous or organic solvent of said polymer. The invention is characterized in that the stage in which the polymer(s) is/are eliminated comprises sub-steps consisting in continuously placing the film (12) in a washing container (101) containing the solvent, wherein the solvent is kept at a controlled temperature; in rinsing the film, drying the film in a continuous manner and winding the film.
