Abstract (en)
[origin: WO2005116568A1] Disclosed is a safety element for weapons, in which unblocking of a weapon is controlled via an exchange of identification keys between a weapon (6) and an unblocking apparatus (1), said weapon (6) being provided with a weapon ID (7) and a safety mechanism (8). The unblocking apparatus (1) which is used for detecting the weapon ID (7) and issuing an unblocking signal (17) is controlled via a controller (2) encompassing an ID memory (3, 4) in such a way that the unblocking apparatus (1) issues an unblocking signal (17) only if the detected weapon ID (7) matches a weapon ID registered in the ID memory (3). Such a safety element for weapons can be used particularly for increasing safety in shooting ranges (27).
