Abstract (en)

[origin: EP1749582A1] The dispenser has an output head (5) displaceable relative to a supply container to produce a party or liquid mass, and an output channel (47) formed with an output opening (37) in the head. The opening is closable by a removable closure part that is held in the head, where the closure part is a sliding part (35) that cooperates with a fixed closure pin (45) and forms an output channel section (42). The sliding part is operable from the upper side of the head.
