Abstract (en)

[origin: EP1749907A2] Controlling method involves changing the operating parameters in a production phase of the textile machine, a procedure for the dynamic adjustment of the adjustment point is carried out, whereby a number of different regulating testing points over each of the measurement result are used. A value representing quality and determination of fiber quantity are carried out. An adjustment of the adjustment point is done based on the evaluation of the determined measurement results. A test regulator insert is used that corresponds to the previous point of regulator insert. An independent claim is also included for textile machine.
