Abstract (en)

[origin: EP1749926A1] The arrangement has a press roll (5) and impression rollers (6, 7). The impression rollers form a press opening with the press roll and a pressing unit (8) is supported on a shaft of the rollers. The press roll comprises a rotating shaft that is supported in a bearing of a support part (16). A bearing surface (A) of the support part is relatively flexibly formed for the bearing of the support part in a region of resulting bearing load.
