Abstract (en)

The sleeve has inner and outer plastic sleeves (3, 4) each presenting a perimeter in the order of perimeter of a container. The sleeves (3, 4) extend in concentric manner and are assembled together by a common welding line (6). The welding line extends along a part of the top of the sleeves (3, 4) so as to constitute a body (7) with double sleeve on whole perimeter of the container. The outer sleeve is provided with precuts (9) each forming a working flap (10) that is adapted to constitute a data medium on its faces.
