Abstract (en)
[origin: WO2005108703A1] Construction module of an appearance equal to a number of standard construction elements arranged in one or several generally horizontal rows with at least one outer surface having a desired pattern provided by differences in level, wherein said module is made in a single-step molding process from one molding paste substantially comprised of lightweight natural raw materials and having a wall thickness similar to a standard construction element. The invention anticipates the prejudice of huge brickwork not being realistically handled by the average construction worker due to heavy weight.
