Abstract (en)
[origin: WO2005116426A1] The invention relates to a method for operation of an internal combustion engine with a supercharger device and with variable inlet valve operation, with regard to the inlet valve timing and/or inlet valve stroke, whereby, on recognition of a positive load demand during the supercharger operation, the at least one variable valve operation is controlled such that a given reserve stroke and/or inlet closing time time reserve is used to increase the amount of charge air (air mass).
