Abstract (en)
[origin: DE102004027123B3] The rest has an adjustable shaft end (2) which can move within a weapon and having a covered lockable bolting device (5), connected to an element and a handle (7) so that the element (6) between the bolting device and an unblocking position is tiltable. A rest rail (12) is within the housing and the bolting device position moves so the shaft end in one position is locked. The rest rail and bolting device are in a distance parallel to each other. The bolting device is spring-tensioned so that the bolting device element is held in the bolting device without manipulation.
