Abstract (en)

[origin: WO2006000681A1] The invention relates to a tool (100) for stripping at least one insulated electric conductor (10) which consists of a conductive core (11) and insulating jacket (12) comprises means (110) for cutting the insulating jacket on a given length in a direction substantially parallel to the conductor axis (X) and means for separating and removing (140, 150) said insulating jacket cut from each electric conductor outside said tool. The inventive cutting, separating and removing means are embodied in the form of one integral unit in such a way that they perfectly follow each other in a sequential manner.
