Abstract (en)

[origin: WO2005114873A1] A communication network comprises at least one piece of communication management equipment (SG) consisting of management means (MG) in charge of generating reference signals to be transmitted in a signalling channel to communication terminals (UE) connected thereto, and provided, along with each of the terminals (LIE), with an internal time reference which is defined in relation to a time set of a satellite positioning system (CS). The management means (MG) are also configured in such a way as to be able to generate a message comprising information representing the time of transmission of a reference signal in relation to the time set with a view to the transmission thereof to the terminals (UE) in a signalling channel.
