Abstract (en)  
[origin: WO2005125162A1] The invention concerns a portable telephone comprising a series of p keys (10, 20) for keying out a sequence of n pressures identifying a call number, all said p keys (10, 20) for keying out a sequence of pressures strictly numbering less than 10, and comprising a memory and calling means capable of being activated by executing such a sequence of n pressures, the calling means being adapted for calling actual numbers in response to the sequences of n pressures which are shorter than said numbers. The invention is characterized in that the memory is adapted to store a number of recipients capable of being associated to the sequences of n pressures greater than n.
