Abstract (en)

[origin: WO2006005814A1] The invention concerns a method for transmitting a message of predetermined validity of duration addressed to a subscriber terminal (14, 16), which consists in providing in the message a field containing data of the message validity of duration and in controlling the message validity of duration based on the data contained in the field. The message is transmitted to the subscriber terminal, and, upon expiry of the message validity of duration, the message is modified or eliminated so as to prevent its being consulted.
