Abstract (en)

[origin: EP1752552A1] Preparation of vermicular graphite casting in which molten iron melt (S) is held in a treatment vessel (3) under an inert atmosphere (A), e.g. nitrogen, or sulphur (S) content below 0.05 wt.% with addition of magnesium (Mg) treatment alloy (B) containing Mg and another metal with elimination of silicon (Si) to an Mg content of the iron melt of 0.0005-0.018 wt.%. The Mg treatment alloy can be NiMg (nickel-magnesium) or CuMg (copper-magnesium) alloy.
